

# Project migration with FluentPro Project Migrator

Today, organizations tend to use and switch between multiple project management systems. This is often due to outdated features, company growth, or acquisition, among other reasons.

Project managers and IT specialists experience complex challenges regarding project management systems migration. They face the choice of manual migration or leaving project data behind.

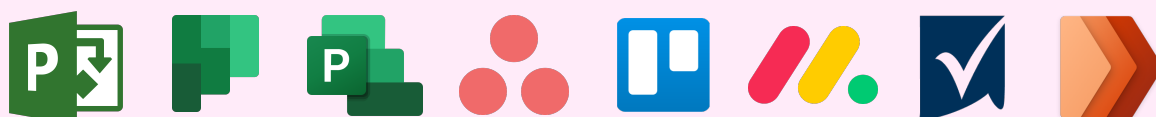

## Manual migration brings numerous challenges:

- It is incredibly time-consuming.
- It can cause numerous errors, such as data corruption or data loss.
- Using open-source scripts is risky and requires proprietary APIs usage.
- It also needs the help of technical specialists focusing on technical issues.

Since manual or custom migration is not suitable for all organizations, FluentPro has created a project migration software: Project Migrator.

**Project Migrator** helps project managers and IT engineers migrate data between project management systems. This cloud-based platform performs fully automated migrations, resulting in 90% time saving over manual migration—time that can now be spent on project management.

## Quickly move all your data between project management systems:

## Benefits of using Project Migrator:

- ✓ 90% of time savings with a completely automated process
- ✓ Reduces all risks, namely data loss, project damages, document corruption, and others
- ✓ Migration is secure. Project Migrator does not require any data download to personal computers; the entire operation runs in a secure cloud (Microsoft Azure)
- ✓ 90% of cost saved on migration
- ✓ Complete flexibility. Migration can be run any time from the web or Microsoft Teams
